

Door Release Exit Device **Micro Switch Push Bars** Mechanical Release for Safety and Reliability

The PBA Micro Switch Bars series is designed to release electromagnetic locks for uninhibited egress. The 1600/1860 features a LED indicator which allows people to locate the bar in the dark quickly and easily. The PBA-890DE is specially designed for doors openings that require a delayed egress where you may already have a standard magnetic lock installed. It can be applied in commercial centers to restrict the egress of commercial center patrons for security concerns or reduce shoplifting and employee theft.

PBA-860DE Delay Egress Features

- Field selectable nuisance delay
- Field selectable 15 or 30 second exit delay
- Emergency signal input
- Key reset and bypass

Models	Voltage (VDC)	Descriptions	Dimensions
